We want to setup VPN. Can anyone guide how to enable TUN/TAP device for VPS?

Is it supported by openvz?

Thanks

Hi,

http://wiki.openvz.org/VPN_via_the_TUN/TAP_device

Some questions to that:

Is it possible to use TUN/TAP from different VEs at the same time?

Is it a safety problem, that each VE need access to the (same?) Device /dev/net/tun (c:10:200:rw)?

Yes and no; AFAIK the tuntap driver is virtualized (the same goes for fuse).
