
Subject: [PATCH 1/2] Uninline find_task_by_xxx set of functions
Posted by [Pavel Emelianov](#) on Mon, 24 Sep 2007 15:20:29 GMT
[View Forum Message](#) <> [Reply to Message](#)

The find_task_by_something is a set of macros are used to find task by pid depending on what kind of pid is proposed - global or virtual one. All of them are wrappers above the most generic one - find_task_by_pid_type_ns() - and just substitute some args for it.

It turned out, that dereferencing the current->nsproxy->pid_ns construction and pushing one more argument on the stack inline cause kernel text size to grow.

This patch moves all this stuff out-of-line into kernel/pid.c. Together with the next patch it saves a bit less than 400 bytes from the .text section.

Signed-off-by: Pavel Emelyanov <xemul@openvz.org>
