Hello, I see this in my dmesg:

```
VZ QUOTA: disk hardlimit reached for id=9890996
VZ QUOTA: disk hardlimit reached for id=9890997
```

But the quota is not actually reached

```
[root@beast ~]# more /proc/vz/vzquota
qid: path      usage  softlimit  hardlimit   time   expire
9890996: /vz/private/9890996
  1k-blocks    231132824  294649856  295698432    0  259200
  inodes       9431813   55781934   55960128     0  259200
9890997: /vz/private/9890997
  1k-blocks    197009056  498073600  499122176    0  259200
  inodes       8837814   55781934   55960128     0  259200
```

--

What can cause this problem?

Could it cause anything like the oom dispatch I am describing in:
http://forum.openvz.org/index.php?t=tree&goto=20742&#msg_20742

Kernel: ovz028stab039.1

Thanks!
Rick

Hello Rick,
sorry for delay

are you sure that the limits has not been changed?
do you have enough free space on /vz partition?
is it probably caused by per-user quota?

Thank you,
Vasily Averin
