Subject: [RFC][PATCH 1/2] System V IPC: new kernel API to change an ID  
Posted by [Pierre Peiffer](#) on Fri, 28 Sep 2007 14:58:37 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

From: Pierre Peiffer <[pierre.peiffer@bull.net](mailto:pierre.peiffer@bull.net)>

This patch provides three new API for changing the ID of an existing System V IPCs.

These APIs are:

```
long msg_mvid(struct ipc_namespace *ns, int id, int newid);  
long sem_mvid(struct ipc_namespace *ns, int id, int newid);  
long shm_mvid(struct ipc_namespace *ns, int id, int newid);
```

They return 0 or an error code in case of failure.

They may be useful for setting a specific ID for an IPC when preparing a restart operation.

To be successful, the following rules must be respected:

- the IPC exists (of course...)
- the new ID must satisfy the ID computation rule.
- the entry (in the kernel internal table of IPCs) corresponding to the new ID must be free.

Signed-off-by: Pierre Peiffer <[pierre.peiffer@bull.net](mailto:pierre.peiffer@bull.net)>
