[View Forum Message](#) <> [Reply to Message](#)

Hallo,

is it possible to add a hardware-cd-writer to a VPS as an normal device /dev/hdX ?

Because i want to use this VPS in a DMZ as an cd-burn-server over LAN.

Thanks.

Sure, use smth like
vzctl set VEID --devnodes hdX:rw --save

The needed device file will be created in VE, and access will be granted.

Hi kir,

thanks for your support, but it doesn't work! If i mount a cd at the vps, i get the following messages.

```
##### code #####  
[root@vps-burn ~]# mount /dev/hdh /media/cdrecorder  
mount: unknown filesystem type 'iso9660'  
[root@vps-burn ~]# mount /dev/hdh /media/cdrecorder -t iso9660  
mount: unknown filesystem type 'iso9660'  
[root@vps-burn ~]# ls -sla /dev/hd*  
0 brw-r----- 1 root root 34, 0 Mar 31 15:23 /dev/hdg  
0 brw-r----- 1 root root 34, 64 Mar 31 15:23 /dev/hdh  
[root@vps-burn ~]  
##### code #####
```

Some rpm package missing?

thanks

slg2001

iso9660 filesystem isn't virtualized in openVZ...

Oh, sorry forgot, that isofs is not allowed in VSP by default.

Can you simply apply the following patch please?

```
--- ./fs/isofs/inode.c.isofs 2006-03-20 18:29:32.000000000 +0300
+++ ./fs/isofs/inode.c 2006-04-04 15:39:52.000000000 +0400
@@ -1459,7 +1459,7 @@ static struct file_system_type iso9660_f
 .name = "iso9660",
 .get_sb = isofs_get_sb,
 .kill_sb = kill_block_super,
- .fs_flags = FS_REQUIRES_DEV,
+ .fs_flags = FS_REQUIRES_DEV | FS_VIRTUALIZED,
};
```

```
static int __init init_iso9660_fs(void)
```

I think, we need to make this run-time configurable in future.

OK, thanks for the patch.

I have only one question!

How to add this patch?

1. you need to install SRC RPM (<http://openvz.org/download/kernel/>)

2. somewhere in /usr/src (depending on host OS you use. e.g. redhat usually keeps them in /usr/src/redhat, SUSE in /usr/src/packages)

you will have directory SPECS and kernel-ovz.spec file in it.

3. in kernel-ovz.spec there is list of patches to apply.

For example, if you say the patch I proposed as /usr/src/.../SOURCES/isofs.patch, then in kernel-ovz.spec you need to add line (after the last 'PatchXXXX: ...' there):

```
Patch9999: isofs.patch
```

and line (right after the last '%patch ...':

```
%patch 9999 -p1
```

4. after that you simply need to build new RPMs with:

```
# rpmbuild -ba --target=i686 kernel-ovz.spec
```

5. build RPMs will be saved in /usr/src/.../RPMS/i686/

sorry for the offtopic, but what about configuration option, that sets the file systems that have to be virtualized in a VPS?

I want to make it runtime configurable. Do you mean this?

[View Forum Message](#) <> [Reply to Message](#)

actually yes...

something like:

```
vzctl set VPSID --fstype +iso9660,+nfs,-xfs --save
```

where +/- enables/disables a feature for the VPS.

what do you think about this?

Hi,

i build the new kernel from last rpm-source-package.

```
/usr/src/redhat/BUILD/ovzkernel-2.6.16/linux-2.6.16/fs/isofs /inode.c
```

```
----- cut -----  
static struct file_system_type iso9660_fs_type = {  
    .owner      = THIS_MODULE,  
    .name       = "iso9660",  
    .get_sb     = isofs_get_sb,  
    .kill_sb    = kill_block_super,  
    .fs_flags   = FS_REQUIRES_DEV | FS_VIRTUALIZED,  
};
```

```
----- cut -----
```

installed kernel: 2.6.16-026test007.1.2006040502 #1 Wed Apr 5 13:27:32 CEST 2006 i686 i686
i386 GNU/Linux

But i get the same errors!

```
----- cut -----  
[root@vps-burn ~]# mount /dev/hdg /media/cdrecorder  
mount: unknown filesystem type 'iso9660'  
[root@vps-burn ~]# mount /dev/hdh /media/cdrecorder  
mount: unknown filesystem type 'iso9660'  
----- cut -----
```

Please, can you post
cat /proc/filesystems
output from VE?

Hmm... I've compiled kernel with this patch on my PC and
was able to mount /dev/hdc from inside VE.

Can you provide, please, .config-file, that you've used compiling your kernel?

I see, that you've compiled isofs as a module.

Please, load it before trying to use cd!
You can check, if the module is loaded, using lsmod command.

Hi,

it works! The iso9660 module was not loaded!

Thank's all for your support!!!
