
Subject: [PATCH] Consolidate IPC namespace cleanup functions

Posted by [Pavel Emelianov](#) on Tue, 02 Oct 2007 14:17:29 GMT

[View Forum Message](#) <> [Reply to Message](#)

When the IPC namespace is terminated all the IPC objects (i.e. ids) living in it are freed. This is done in a similar way in X_exit_ns() functions. All the code can be consolidated, saving 122 bytes when the NAMESPACES are on.

This patch must be applied after the ones with the NAMESPACES config option introduced.

Signed-off-by: Pavel Emelyanov <xemul@openvz.org>
