Subject: [PATCH 0/3] Consolidate cgroup files creation for resource counters  
Posted by [Pavel Emelianov](#) on Wed, 03 Oct 2007 10:53:27 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

Right now we have only one controller in -mm tree - the memory one - and it initializes all its files manually. After I developed the kernel memory one it turned out, that the names of resource counter specific files has changed. In the future, if anything in the resource counters change, we'll have to rewrite all the controllers we will have by that time.

To make all the containers working with the resource counters look similar I propose to create the resource counters specific files in one place.

Any comments/wishes before I send it to Andrew are welcome.

Subject: [PATCH 2/3] Introduce the res\_counter\_populate() function  
Posted by [Pavel Emelianov](#) on Wed, 03 Oct 2007 10:57:54 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

This one is responsible for initializing the RES\_CFT\_MAX files properly and register them inside the container.

The caller must provide the cgroup, the cgroup\_subsys, the RES\_CFT\_MAX \* sizeof(cftype) chunk of uninitialized memory and the read and write callbacks.

In the future, if we add more res\_counter files, change their names or anything else, no caller will be affected.

Note, that the controller code dealing with the cftype files for resource counters becomes much shorter and won't have to be changed in the future.

This prevents the resource counters from being used for anything that doesn't measure its limit/usage in bytes. E.g. number of tasks.

I like the idea of having a unified interface, but can't they just be called "usage" and "limit"?

Paul

For memory your changes make sense, but the file names cannot be limit\_in\_bytes and usage\_in\_bytes for other controllers (if and when they use res\_counters)

```

I've been thinking of writing a tool, that will generate all the code necessary to write a controller under cgroups. Another TODO (low priority).

```

I see. OK, I will rework the patches to make them more generic.  
Moreover, I've just faced one more race in this set :(
