Hi,

I have two VE on my openvz Host.

One VE have apache2 and i have installed apache2 on the host.

If i want restarted apache on my host, Failed

If i stop apache on my VE, that's OK

How to restart apache on my host?

We do not recommend installing a web server on your host system, for security purposes. Create a new dedicated VE for it.

If you still want to use apache on your host system, answer depends heavily on what linux distribution you use on your host system (assuming apache2 is coming with that distro).

Hi,

I use debian

I'm installed apache on the host because i want use a web interface (robovz).

It's possible to use robovz on a VE
