---

I download ovzkernel-2.6.18-8.1.14.el5.028stab045.1.src.rpm and try to compile new kernel according to [http://wiki.openvz.org/Kernel\\_build](http://wiki.openvz.org/Kernel_build). I change kernel-ovz.spec not to including XEN as following:

```
%define buildxen 0
```

then use the command:

```
rpmbuild -ba --target=x86_64
```

I only get ovzkernel-2.6.18-8.1.14.el5.028stab045.1.src.rpm,  
and can't get other rpms like:

```
ovzkernel-2.6.18-8.1.8.el5.028stab045.1.x86_64.rpm,
```

```
ovzkernel-devel-2.6.18-8.1.8.el5.028stab045.1.x86_64.rpm
```

```
ovzkernel-header-2.6.18-8.1.8.el5.028stab039.1.x86_64.rpm
```

but I can use the same method to compile kernel from

```
ovzkernel-2.6.18-8.1.8.el5.028stab039.1.src.rpm.
```

My OS is CentOS 5.0 x86\_64.

I need help.

---

```
rpm -ivh ovzkernel-2.6.18-8.1.14.el5.028stab045.1.src.rpm
```

```
cd /usr/src/redhat/SPECS
```

```
rpmbuild -ba --target=x86_64 kernel-ovz.spec
```

after patching, I got following output:

```
Executing(%build): /bin/sh -e /var/tmp/rpm-tmp.11008
```

```
+ umask 022
```

```
+ cd /usr/src/redhat/BUILD
```

```
+ cd ovzkernel-2.6.18
```

```
+ LANG=C
```

```
+ export LANG
```

```
+ unset DISPLAY
```

```
+ rm -rf /var/tmp/kernel-2.6.18-8.1.14.el5.028stab045.1.nic-root
```

```
+ mkdir -p /var/tmp/kernel-2.6.18-8.1.14.el5.028stab045.1.nic-root/boot
```

```
+ cd linux-2.6.18.x86_64
+ exit 0
Executing(%install): /bin/sh -e /var/tmp/rpm-tmp.11008
+ umask 022
+ cd /usr/src/redhat/BUILD
+ cd ovzkernel-2.6.18
+ LANG=C
+ export LANG
+ unset DISPLAY
+ cd linux-2.6.18.x86_64
+ /usr/lib/rpm/find-debuginfo.sh /usr/src/redhat/BUILD/ovzkernel-2.6.18
0 blocks
find: /var/tmp/kernel-2.6.18-8.1.14.el5.028stab045.1.nic-root/usr/ lib: No such file or directory
+ /usr/lib/rpm/redhat/brp-compress
+ /usr/lib/rpm/redhat/brp-strip-static-archive /usr/bin/strip
+ /usr/lib/rpm/redhat/brp-strip-comment-note /usr/bin/strip /usr/bin/objdump
+ /usr/lib/rpm/brp-python-bytecompile
+ /usr/lib/rpm/redhat/brp-java-repack-jars
Checking for unpackaged file(s): /usr/lib/rpm/check-files
/var/tmp/kernel-2.6.18-8.1.14.el5.028stab045.1.nic-root
Wrote: /usr/src/redhat/SRPMS/ovzkernel-2.6.18-8.1.14.el5.028stab045.1.nic.src.rpm
Executing(%clean): /bin/sh -e /var/tmp/rpm-tmp.76453
+ umask 022
+ cd /usr/src/redhat/BUILD
+ cd ovzkernel-2.6.18
+ rm -rf /var/tmp/kernel-2.6.18-8.1.14.el5.028stab045.1.nic-root
+ exit 0
```

so only kernel-\*src.rpm was created.

It looks like you have modified kernel-ovz.spec file incorrectly.  
Please remove broken file version, re-install ovzkernel-2.6.18-8.1.14.el5.028stab045.1.src.rpm,  
make your changes carefully and restart the compilation

Thank you,  
Vasily Averin

according to your suggestion, I compared the kernel-ovz.spec file from 2.6.18-8.1.14.el5.028stab045.1 to the one from 2.6.18-8.1.8.el5.028stab039.1, and found :  
in 2.6.18-8.1.8.el5.028stab039.1

```
%define buildup 1
```

```
...
```

```
%define buildxen 0
```

but in 2.6.18-8.1.14.el5.028stab045.1:

```
%define buildup 0
```

```
...
```

```
%define buildxen 1
```

so kernel will not be compiled. I changed "buildup" to 1 , "buildxen" to 0, then I got the right result. I think \*.src.rpm should include kernel-\*-xen.config.ovz, otherwise I can't get kernel package supporting xen.

Thank you, Vasily Averin
