i have hostnude with this spesification
ip4 3gb hd 80gb ram 1gb os HN fedora core 6
i have create 4 vps

```
[root@vps ~]# vzlist
  VEID   NPROC STATUS IP_ADDR   HOSTNAME
  140     4 running 192.168.0.140 slackware.vps.dj-avu.us
  141     4 running 192.168.0.141 slackware.vps.dj-avu.us
  142    21 running 192.168.0.142 fedora.vps.dj-avu.us
  144    12 running 192.168.0.144 fedora.vps.dj-avu.us
```

```
[root@vps ~]#
```

if i ssh to some vps example to 142 ip= 192.168.0.142 then type reboot -h now thats vps will rebooting but not run agains, thats problem also happens if i type

```
[root@vps ~]# vzctl exec 142 reboot
```

```
[root@vps ~]# vzlist
  VEID   NPROC STATUS IP_ADDR   HOSTNAME
  140     4 running 192.168.0.140 slackware.vps.dj-avu.us
  141     4 running 192.168.0.141 slackware.vps.dj-avu.us
  144    12 running 192.168.0.144 fedora.vps.dj-avu.us
```

```
[root@vps ~]#
```

if i type vzctl restart 142 / vzctl restart VEID its can run and thats vps will rebooting

```
[root@vps ~]# vzctl restart 142
Restarting VE
Starting VE ...
VE is unmounted
VE is mounted
Adding IP address(es): 192.168.0.142
Setting CPU units: 1000
Configure meminfo: 49152
Set hostname: fedora.vps.dj-avu.us
File resolv.conf was modified
VE start in progress...
```

```
[root@vps ~]#
[root@vps ~]# vzlist
  VEID   NPROC STATUS IP_ADDR   HOSTNAME
  140     4 running 192.168.0.140 slackware.vps.dj-avu.us
  141     4 running 192.168.0.141 slackware.vps.dj-avu.us
  142    21 running 192.168.0.142 fedora.vps.dj-avu.us
  144    12 running 192.168.0.144 fedora.vps.dj-avu.us
```

```
[root@vps ~]#
```

so what can i do to solved thats problem, i can everytime in my HN if some user reboot their vps

they will contact me for start their vps manually. on my HN i has set --onboot yes btw thats problem still hapen.
anybody can solved this problem and how to configure it so if some user reboot their vps can start againts no need i am to start manuali in HN.

Hi,

every 5min, script /usr/share/vzctl/scripts/vpsreboot, should started via cron and started all reboot-marked VE's.

Please check if cron started this script and take a look in /var/log/vzctl.log if "vereboot" entries exist.

in my HN i have add crontab
5 * * * * /usr/share/vzctl/scripts/vpsreboot

btw some vps os can't reboot again
my HN os is fedora core and i have 2 vps slackware 11 and 2vps fedora core 7

both of fedora core can start againts but slackware die.

```
[root@vps ~]# vzlist
  VEID   NPROC STATUS IP_ADDR   HOSTNAME
  140     4 running 192.168.0.140 slackware.vps.dj-avu.us
  141     4 running 192.168.0.141 slackware.vps.dj-avu.us
  142    21 running 192.168.0.142 fedora.vps.dj-avu.us
  144    12 running 192.168.0.144 fedora.vps.dj-avu.us
[root@vps ~]#
```

this is tail of logs

```
2007-10-18T05:35:01+0700 vereboot : VE 142 : reboot
