Hi,

It is my first time to use the openvz. I downloaded stuff (kernel-patch, vzctl vzquota) by apt-get on my Debian4 and installed them according the instructions of

http://wiki.openvz.org/Installation_on_Debian

However, when I rebooted my computer, I got a error message in system booting:

....

```
[ 10.543572] VFS:Cannot open root device "sda1" or unknown-block(0,0)
[ 10.543635] Please appedn a correct "root=" boot option
[ 10.543697] Kernel panic - not syncing : VFS: Unable to mount root
fs on unknown-block(0,0)
```

what is matter with it?

My running environment is Debian4 on VMware 5.5.

Thanks!

Best washes,

Ian

You probably configured your kernel incorrectly (missing initrd, device of filesystem drivers?). Try installing a pre-built kernel image instead, it's more likely to be bootable without problems.

regards,

Where can I get the pre-built kernel image?

After install the kernel-patch, the system compiled the kernel and created the optional item in /boot/grub/menu.lst. What I had done is under the instructions of openvz wiki. Is there something wrong?

Thanks in advance.

Best Regards,

Ian

http://debian.sysfs.org I suppose. The wiki page you referred gives info
about how to configure this.

These instructions are OpenVZ-specific, i.e. they only recommend
openvz-specific options in kernel config. Any other kernel config
options (there are a lot of) are on your own. One simple example of what
could be done wrong -- if you haven't enabled support for SATA disks,
and your HDD is SATA you are in trouble.

So, if you are not experienced in kernel recompilation, you'd be better
of with precompiled kernel.

Hope that helps,

Kir.

<http://download.openvz.org/debian/dists/etch/main/binary-i386/base/>

In your sources list add:

deb <http://download.openvz.org/debian> etch main

I'm using linux-image-2.6.18-openvz-13-39.1d2-686_028.39.1d2_i386.deb

I added the line in source.list, but apt-cache search said it can not open the website.

I opened the link given above and found the image file, but I don't know how to use it after download the image file.

Could you give me some advices?

Thanks

ian
