Hi,

1. I understand from your post following thing, you have sold 300 Gb and now you want to limit the traffic, i.e. don't allow to use more than 300 Gb?

2. You can use for example iptables for this purpose. I mean Advanced Features of netfilter/iptables. Please, see http://linuxgazette.net/108/odonovan.html

3. It is possible to utilize some programs that allow to gather statistics. For example, see http://lionet.info/ipcad/
