Bug\_Subject: on the core 2.6.18-8.1.14.el5.028stab045.1sa1 x86\_64 when using iptables\_32bit in VE\_32bit, kernel Oops occurs

The "shorewall-shell-4.0.4" version is used (it does not depend on version)

When performing

# shorewall trace restart,

kernel Oops "bug\_ipt\_hashlimit.txt" occurs in the following line:

```
/sbin/iptables -A fooX1234 -m hashlimit --hashlimit 4 --hashlimit-burst 5 --hashlimit-name  
fooX1234 --hashlimit-mode dstip -j ACCEPT
```

When autostarting shorewall in VE during VE start process, kernel Oops "bug\_ipt\_recent.txt" occurs.

The problem can be avoided by unloading the following modules on VE0.

rmmod ipt\_recent

rmmod ipt\_hashlimit

See loading and dump logs in the attachment.
