i have core2duo machine with 2 gb ram and 120 gb hard drive
os i used is fedore as main and fedore-6 as os template

when i try to install adventnet service desk it shows error:

.....

.....Error occurred during initialization of VM

java.lang.OutOfMemoryError: unable to create new native thread

Hello sohan,

sohanraja wrote on Tue, 23 October 2007 12:18Error occurred during initialization of VM
java.lang.OutOfMemoryError: unable to create new native thread[/color]

Most probably your VE is out of memory, could you please check /proc/user_beancounters for any failcounters? If you find any - it makes sense to increase the appropriate limit.
