Subject: Quota error when trying to start openvz

Hi,

I get this problem when trying to start openvz with the vzctl start 1 command,

vzquota : (error) Quota getstat syscall for id 1: Inappropriate ioctl for devicevzquota init failed [3]

So the question is; what does this mean? To me it looks like I havent set quota for my vz, or is this related to anything else?

Can you be more specific? What kernel are you running? Which vzctl version? Do you have openvz modules loaded?

If you have compiled kernel by yourself, can you please attach your .config?

Shure!
I use the 2.6.16-026test005.1 kernel, the openvz modules are loaded,

lsmod gives me:
tuva davalex # lsmod
Module Size Used by
vzdev 2116 0
vzmon 41760 1 vzwdog
vzdev 2116 1 vzmon

my vzctl version is
tuva ~ # vzctl --version
vzctl version 3.0.0-4

Any thing more you need to know? My distro is Gentoo.

Yes, can you attach kernel .config please? It should be at
/usr/src/linux-2.6.16-openvz-026.005/.config

As a side and possibly unrelated note -- 026.007 kernel is out and it is in portage tree already -- should give you better experience.

Ill try the new kernel, and see if it gives me any luck!

I think the problem is either with your kernel .config or with vzctl compilation. Try to emerge 026.007 and reemerge vzctl against this kernel.

As far as I know, veid 1 is reserved.
Please, try to use veid 101 and greater.

you have no vzdquota module loaded.
do:
modprobe vzdquota
and check that config option CONFIG_VZ_QUOTA=m in your .config file.
