When I stop one or more of the running vps's I get these messages: "ub 101 helds 1878 in kmemsize on put".

What does it meen? Is this normal or a error msg?

I run 5x Debian Etch vps's on a Intel 2.4ghz with 1gb ram.

The host system is also Debian Etch (4.0)

I use the 2.6.18-openvz-13-1etch4-686 kernel at the moment.

With linux-image-2.6.18-openvz-686 i receive the same messages wen I stop one or more vps's.

When I change KMEMSIZE and/or PRIVVMPAGES numbers greater or smaller it makes no difference.
