View Forum Message <> Reply to Message

Hello,
 I cannot start the VE, here some command:

[root@dedicated ~]# vzctl create 112 --ostemplate centos-4-i386-default
Unable to get full ostemplate name for centos-4-i386-default
Creating VE private area (centos-4-i386-default)
Performing postcreate actions
VE private area was created

[root@dedicated ~]# vzctl start 112
Starting VE ...
VE is mounted
Unable to set capability: Operation not permitted
Unable to set capability
VE start failed
VE is unmounted

Operating system is CentOS 4.5

[root@dedicated ~]# uname -a
Linux dedicated.d.net 2.6.18-8.1.14.el5.028stab045.1PAE #1 SMP Mon Oct 1 13:46:57 MSD
2007 i686 i686 i386 GNU/Linux

Does selinux disabled ?
What tells which lcap ?
Does /var/log/messages tells anything, when you try to start vps?

//also, do not forget update your kernel.

Subject: Re: Cannot Start VE - Unable to set capability: Operation not permitted

View Forum Message <> Reply to Message

selinux is disabled

[root@dedicated ~]# which lcap
/usr/bin/which: no lcap in (/usr/kerberos/sbin:/usr/kerberos/bin:/usr/lib/courier-imap/
sbin:/usr/lib/courier-imap/bin:/usr/local/sbin:/usr/local/bi
n:/sbin:/bin:/usr/sbin:/usr/bin:/usr/X11R6/bin:/root/bin)

[root@dedicated ~]# vzctl start 100
Starting VE ...
VE is mounted
Unable to set capability: Operation not permitted

Unable to set capability
VE start failed
VE is unmounted

There is no error message in /var/log/messages

Do you compile kernel by your self?
If so, can you try use openvz team compiled kernel?

Subject: Re: Cannot Start VE - Unable to set capability: Operation not permitted

Obviously you have some another utility that restricts capability.
Could You please show us 'cat /proc/self/status' output.

Linux localhost 2.6.18-8.1.14.el5.028stab045.1PAE #1 SMP Mon Oct 1 13:46:57 MSD 2007 i686 i686 i386 GNU/Linux

I used this kernel from openvz

Subject: Re: Cannot Start VE - Unable to set capability: Operation not permitted
Posted by vaverin on Wed, 14 Nov 2007 14:05:54 GMT

I'm sorry, but it doesn't look like openvz kernel.
Our kernel have a slightly different format:
uname -a
Linux ts10 2.6.18-028stab049.1-PAE #1 SMP Thu Nov 8 19:53:27 MSK 2007
i686 i686 i386 GNU/Linux
[root@ts10 ~]# cat /proc/self/status
Name: cat
State: R (running)
SleepAVG: 78%
Tgid: 9079
Pid: 9079
PPid: 8411
TracerPid: 0
FNid: 0
Uid: 0   0   0   0
Gid: 0   0   0   0
FDSize: 256
Groups: 0 1 2 3 4 6 10
envID: 0
VPid: 9079
PNState: 0
StopState: 0
VmPeak: 3676 kB
VmSize: 3676 kB
VmLck: 0 kB
VmHWM: 428 kB
VmRSS: 428 kB
VmData: 156 kB
VmStk: 88 kB
VmExe: 16 kB
VmLib: 3404 kB
VmPTE: 32 kB
StaBrk: 0804d000 kB
Brk: 0826e000 kB
StaStk: bfa41da0 kB
ExecLim: ffffffff
Threads: 1
SigQ: 1/55296

SigPnd: 0000000000000000
ShdPnd: 0000000000000000
SigBlk: 0000000000000000
SigIgn: 0000000000000000
SigCgt: 0000000000000000
SigSvd: 0000000000000000
CapInh: 0000000000000000
CapPrm: 00000000fffffeff
CapEff: 00000000fffffeff
Cpus_allowed: ffffffff
Mems_allowed: 1
TaskUB: 0.0
MMUB: 0.0

I would note that our kernels should have the following strings:
envID:
VPid:
TaskUB:

Your kernel doen't shows this strings but outputs etra line with
PaX: PeMRs

I'm very sorry, but could You please re-check the kernel on Your node?

thank you,
Vasily Averin

Mems_allowed:   1
TaskUB: 0
MMUB:  0
```

```
[root@dedicated cache]# vzctl create 100 --ostemplate centos-4-i386-default

Creating VE private area (centos-4-i386-default)
vzquota : (error) Quota on syscall for 100: File exists
vzquota on failed [3]
vzquota : (error) Quota is not running for id 100
Performing postcreate actions
VE private area was created
[root@dedicated cache]# vzctl start 100
Starting VE ...
vzquota : (error) Quota on syscall for 100: File exists
vzquota on failed [3]
```

So i set in file /etc/sysconfig/vz
DISK_QUOTA=no

now the result

[root@dedicated cache]# vzctl start 100
Starting VE ...
VE is mounted
Adding IP address(es): 209.250.234.166
Setting CPU units: 1000
Configure meminfo: 49152
File resolv.conf was modified
VE start in progress...

Anyway the ip address is needed set to the real ip address or network ip address class ?

Best Regards,
Joko Frank Octo

Sorry,
I do not understand your last question. To be accessible via network each VE should have its own IP, like a dedicated node.

thank you,
Vasily Averin

View Forum Message <> Reply to Message

Sorry.

   The question is how to make the VE is accessible from Internet and the Host node is accessible from VE.

I'm a little confuse with the tutorial in the openvz wiki about VE ip address, the ip address should be a local network class type ip or public ip address ?

Also the nameserver should be set in VE is ISP nameserver or the host node nameserver (since dns server is installed in host node)

Thank you

Most simplest way is to assign VE public IP.
However you can use private IP for VEs too:
http://wiki.openvz.org/Using_NAT_for_VE_with_private_IPs

[host-node] vzctl create 100 --ostemplate=debian-4.0-i386-minimal
[host-node] vzctl set 100 --ipadd 192.168.0.100 --save
[host-node] vzctl set 100 --nameserver 209.250.234.162 --save
[host-node] vzctl set 100 --hostname vps100 --save
[host-node] vzctl set 100 --netif_add eth0,00:0C:29:08:EE:48 --save
[host-node] vzctl start 100
[host-node] ifconfig veth101.0 0
[host-node] echo 1 > /proc/sys/net/ipv4/conf/veth100.0/forwarding
[host-node] echo 1 > /proc/sys/net/ipv4/conf/veth100.0/proxy_arp
[host-node] echo 1 > /proc/sys/net/ipv4/conf/eth0/forwarding
[host-node] echo 1 > /proc/sys/net/ipv4/conf/eth0/proxy_arp
[host-node] vzctl enter 100

[ve-100] ifcfg eth0 0
[ve-100] ifconfig eth0 192.168.0.99
[ve-100] route add default eth0
[ve-100] exit

[host-node] route add 192.168.0.99 dev veth100.0
[host-node] iptables -t nat -A POSTROUTING -o eth0 -j SNAT --to 209.250.234.162

[host-node] vzctl enter 100
[ve-100] ping jfoc.net --> the result is ping: unknown host jfoc.net

Above is an instruction i followed step-by-step, but still cannot access the Internet From VE

JFOC wrote on Thu, 15 November 2007 11:54[host-node] vzctl create 100
--ostemplate=debian-4.0-i386-minimal
[host-node] vzctl set 100 --ipadd 192.168.0.100 --save
[host-node] vzctl set 100 --nameserver 209.250.234.162 --save
[host-node] vzctl set 100 --hostname vps100 --save

I would note that it is enough for VE networking via venet interface
http://wiki.openvz.org/Virtual_network_device
veth interface is an alternative soulution, and you can not use it at all.
JFOC wrote on Thu, 15 November 2007 11:54[host-node] vzctl set 100 --netif_add
eth0,00:0C:29:08:EE:48 --save
[host-node] vzctl start 100
[host-node] ifconfig veth101.0 0
[host-node] echo 1 > /proc/sys/net/ipv4/conf/veth100.0/forwarding
[host-node] echo 1 > /proc/sys/net/ipv4/conf/veth100.0/proxy_arp
[host-node] echo 1 > /proc/sys/net/ipv4/conf/eth0/forwarding
[host-node] echo 1 > /proc/sys/net/ipv4/conf/eth0/proxy_arp
[host-node] vzctl enter 100

[ve-100] ifcfg eth0 0
[ve-100] ifconfig eth0 192.168.0.99
[ve-100] route add default eth0
[ve-100] exit

[host-node] route add 192.168.0.99 dev veth100.0

As I've explained above Veth interafce is not necessary, but
at this point you have configured veth interface too.

JFOC wrote on Thu, 15 November 2007 11:54[host-node] iptables -t nat -A POSTROUTING -o eth0 -j SNAT --to 209.250.234.162

this rule means that all forwarded packets will have source ip=209.250.234.162. Is it your hardware node's IP?

JFOC wrote on Thu, 15 November 2007 11:54[host-node] vzctl enter 100
[ve-100] ping jfoc.net --> the result is ping: unknown host jfoc.net

Above is an instruction i followed step-by-step, but still cannot access the Internet From VE
As far as I see you cannot translate jfoc.net name to IP. Are you sure that you have started nameserver on your hardware node? If not -- you can set to VE the same nameserver that uses your hardware node.

Then let's check the following:
- do you able to ping HW node from inside VE (by using its IP)?
- do you able to ping some external IP from inside VE?

thank you,
Vasily Averin

Yes that's 209.250.234.162 is my static ip for server

- do you able to ping some external IP from inside VE?

- Yes i'm sure the nameserver has been running well, because this is dedicated server for web hosting.
- I cannot ping HW node from Inside VE (using name / ip)
- I cannot ping any external IP from VE

Sorry my bad english, I mean that you have configured venet network interface and therefore using veth is not necessary.

JFOC wrote on Thu, 15 November 2007 12:58

Hmm. Is eth0 interface up inside your VE?
Could you please show list of interfaces ("ip a l" output) and routing table inside your VE ("ip r l" output).

IMHO it make sense try to remove veth configuration and repeat your experiment.
Also you can give me acess permission for your node (via PM) and I'll try to investigate situation on your node.
