Subject: Console access with VNC

Hi all,

I just managed to access my VPS via X11, using XDMCP and an entry in inetd.conf:

```
vnc stream tcp nowait nobody /usr/bin/Xvnc Xvnc -inetd -query 127.0.0.1  
-once -depth 16 -geometry 1024x768 securitytypes=none
```

That way I can simply open an X11 session (note: there is no need to use an extra vnc password)

I wonder if it is possible to setup something similar to get a console login using linuxvnc or vncommand? I want to avoid setting an extra vnc password, and use a standard login instead.
