Probably should have waited till upgrading VEs to Fedora 8 but I did it and there are issues. When using rsync sending files to the VE I get:

```
rsync: failed to set times on "/etc/exim/control/domains/ajavideo.com": Function not implemented (38)
```

Doing some research it appears there is some new call in the 2.6.22 kernel and Fedora 8 is compiled with 2.6.23. However my kernel is 2.6.18 and apparently that's the problem. Still investigating to find a work around.

Here's more info on the problem.

https://bugzilla.samba.org/show_bug.cgi?id=4977

And I've found a work around. I just used rsync from FC6 and that fixed it for now.

Thanks for the report and the investigation. I have filed a bug for this:

<http://bugzilla.openvz.org/725>

Kernel team will decide if they backport this syscall or leave this as is (since timestamps on symlinks rarely have any meaning).

It's not that those timestamps are that important. The big problem is that when you do an rsync you get nasty error messages which makes the problem look far worse.
