Subject: [RFC][for -mm] memory controller enhancements for NUMA [0/10] introduction
Posted by KAMEZAWA Hiroyuki on Wed, 14 Nov 2007 08:39:50 GMT
View Forum Message <> Reply to Message

Hi,

This is a patch-set for memory controlelr on NUMA.
patches are

1. record nid/zid on page_cgroup struct
2. record per-zone active/inactive
3-9 Patches for isolate global-lru reclaiming and memory controller reclaming
10. implements per-zone LRU on memory controller.

now this is just RFC.

Tested on
  2.6.24-rc2-mm1 + x86_64/fake-NUMA(# of nodes = 3)

I did test with numactl under memory limitation.
 % numactl -i 0,1,2 dd if=.....

It seems per-zone-lru works well.

I'd like to do test on ia64/real-NUMA when I have a chance.

Any comments are welcome.

Thanks,
 -kame

Subject: [RFC][for -mm] memory controller enhancements for NUMA [2/10] account active inactive
Posted by KAMEZAWA Hiroyuki on Wed, 14 Nov 2007 08:42:33 GMT
View Forum Message <> Reply to Message

Counting active/inactive per-zone in memory controller.

This patch adds per-zone status in memory cgroup.
These values are often read (as per-zone value) by page reclaiming.

In current design, per-zone stat is just a unsigned long value and
not an atomic value because they are modified only under lru_lock.

If we need to modify value withou taking lock, we'll have to use
atomic64_t.

This patch adds TOTAL and INACTIVE values.

 TOTAL .... the number of pages of zone in memory cgroup.
 INACTIVE .... the number of inactive pages of zone in memory cgroup.

the number of acitve pages is TOTAL - INACTIVE.

This patch turns memory controler's early_init to be 0 for calling
kmalloc().

Subject: [RFC][for -mm] memory controller enhancements for NUMA [9/10] zone reclaim vs. cgroup reclaim isola
Posted by KAMEZAWA Hiroyuki on Wed, 14 Nov 2007 08:55:28 GMT
View Forum Message <> Reply to Message

When using memory controller, there are 2 levels of memory reclaim.
 1. zone memory relcaim because of system/zone memory shortage.
 2. memory cgroup memory reclaim because of hitting limit.

These two can be distinguished by sc->mem_cgroup parameter.
(we can use macro "scan_global_lru")

This patch tries to make memory cgroup reclaim routine avoid affecting
system/zone memory reclaim. This patch inserts if (scan_global_lru(sc)) and
hook to memory_cgroup reclaim support functions.

This patch can be a help for isolating system lru activity and group lru
activity and shows what additional functions are necessary.

 * mem_cgroup_calc_mapped_ratio() ... calculate mapped ratio for cgroup.
 * mem_cgroup_reclaim_imbalance() ... calculate active/inactive balance in
    cgroup.
 * mem_cgroup_calc_reclaim_active() ... calclate the number of active pages to
   be scanned in this priority in mem_cgroup.

 * mem_cgroup_calc_reclaim_inactive() ... calclate the number of inactive pages
   to be scanned in this priority in mem_cgroup.

 * mem_cgroup_all_unreclaimable() .. checks cgroup's page is all unreclaimable
       or not.
 * mem_cgroup_get_reclaim_priority() ...
 * mem_cgroup_note_reclaim_priority() ... record reclaim priority (temporal)
 * mem_cgroup_remember_reclaim_priority()
       .... record reclaim priority as
     zone->prev_priority.
     This value is used for calc reclaim_mapped.

Subject: [RFC][for -mm] memory controller enhancements for NUMA [10/10] per-zone-lru
Posted by KAMEZAWA Hiroyuki on Wed, 14 Nov 2007 08:57:37 GMT
View Forum Message <> Reply to Message

I think there is a consensus that memory controller needs per-zone lru.
But it was postphoned that it seems some people tries to modify lru of zones.

Now, "scan" value, in mem_cgroup_isolate_pages(), handling is fixed. So,
demand of implementing per-zone-lru is raised.

This patch implements per-zone lru for memory cgroup.
I think this patch's style implementation can be adjusted to zone's lru
implementation changes if happens.

i guess
 struct foo {
  struct list_head active_list;
  struct list_head inactive_list;
 } lists[MAX_NR_ZONES];
is better.

> @@ -139,8 +144,20 @@ struct mem_cgroup {

'zone' seems unused.

YAMAMOTO Takashi

Ah, yes. I'll change this.

thanks, I'll do test with !CONFIG_NUMA in the next post.

Hi, KAMEZAWA-San,

Thanks for the patchset, I'll review it and get back. I'd
also try and get some testing done on it.

Hi, thank you.

I'm now writing per-zone-lru-lock patches and reflects comments from YAMAMOTO-san.

Thanks,
-Kame

I noticed this patch doesn't handle memory migration in sane way.
I will fix in the next version.
