Subject: execute HN script after VE starts :: similar to <veid>.mount

Hello,

I want to execute a script on the HN after a VE is started. the <veid>.mount script works but executes before the VE is actually running. Is there any hack to have the equivalent of <veid>.start?

basically I just want "vzctl exec <veid> command" automatically run after a VE starts.

I do not want to put the script in the VE's startup scripts.

Thanks for any pointers!
Rick

Hi Rick,

we already have per-ve start/stop scripts:
http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf
pages 88, 89

thank you,
Vasily Averin

Hi, sorry I should have mentioned the script needs to run in the HN context (global start). Thanks for the info, I'll keep digging around.
