hi all
this bug or i can't do it
i have this probelm how can i fix it if one have patch plz help me

or whats kernel support this

#slow VE creation
#ipt_owner mask should be added to vzctl

thanks

Dear Mr.Ash

Do you want to use ipt_owner module inside VE on 2.6.9 kernels? ipt_owner module is virtualized but vzctl do not allow to use it inside VE and you need to update vzctl package.
You need to add the followng string into iptables array in
src/lib/iptables.c file:

```
{"ipt_owner", VE_IP_MATCH_OWNER_MOD, VE_IP_MATCH_OWNER},
```

before {NULL, 0} string.

I expect it should resolve you issue.

I'm not sure that I've understand you correctly. In this case could you please explain your problem with more details?

thank you,

Vasily Averin

thanks Vasily
this kernel i have
2.6.9-023stab044.11-enterprise

vzctl version 3.0.18

how can i add ipt_owner to vzctl to work inside ve

this path not correct src/lib/iptables.c

thanks again (F)

i w8 ur reply

Dear Mr.Ash

Please use the following patch for vzctl:
<http://git.openvz.org/?p=vzctl;a=commitdiff;h=a8a9a236b375d5fc73db824277d565158dd11464>

thank you,
Vasily Averin
