
Subject: [PATCH][PKTGEN] Fix double unlock of xfrm_state->lock

Posted by [Pavel Emelianov](#) on Mon, 19 Nov 2007 09:47:00 GMT

The pktgen_output_ipsec() function can unlock this lock twice due to merged error and plain paths. Remove one of the calls to spin_unlock.

Other possible solution would be to place "return 0" right after the first unlock, but at this place the err is known to be 0, so these solutions are the same except for this one makes the code shorter.

Good catch.

Acked-by: Jamal Hadi Salim <hadi@cyberus.ca>

cheers,

jamal
