Hi,

As stated in the bug report #740 (http://bugzilla.openvz.org/show\_bug.cgi?id=740), I have problems when using xfs\_quota on an OpenVZ kernel, installed through http://download.openvz.org/debian.

Kernel being used is: # dpkg --list|grep openvz ii linux-image-2.6.18-openvz-amd64 028.18.1-2.6.18-12-1

I am not sure this really is a bug but when using the stock-debian kernel it does work.

Any suggestions or hints are welcome...

cheers, stoffell
