This is totally not related to OpenVZ.

Despite the unclearness of your question I'd say:

- Yes, I think the kernel should handle that.
- The raptor are probably better, but it can depend.

You should write to a linux-specific forum or mailing list, not here...

- 1) kernel should have support for sata controller, in this case it will support disks attached to this controller.
  - 2) currently linux have support for most popular sata controllers, therefore I expect you will not have any problems.
-
