how can i fix the problem

```
vzctl start 190
Unable to open /etc/vz/vz.conf: No such file or director
Global configuration file /etc/vz/vz.conf
```

Does the file exist?

What are the steps you've followed?

Please provide more information.

i have fix the last problem now iam getting

```
[root@servervps1 ~]# vzctl start 101
Unable to open /dev/vzctl: No such file or directory
Please check that vzdev kernel module is loaded and you have sufficient permissions to access
the file.
```

The most common reason of this problem is that OpenVZ kernel modules were not loaded. In order to check it, run ``/sbin/lsmmod`` command.

If it is the reason, you need to figure out why modules were not loaded. For example, in case if you use RedHat-like distribution, check that "vz" service is running.

HTH,

Vasily.
