How to monitor the bandwidth ?

thanks

If you mean traffic accounting, this, like on the ordinary Linux system, can be done using iptables. See <http://www.netfilter.org/> for details, or google for linux iptables traffic accounting.

If you mean traffic shaping, this, like on the ordinary Linux system, can be done using tc utility. See <http://www.lartc.org/> or google for linux traffic shaping.

I would also add that both traffic shaping and accounting are available in Virtuozzo.

I have added a post in the HOW-TO section for doing Bandwidth Accounting. Please have a look and post any questions/comments you might have.

Hope this helps!

Does any of the systems mentioned above have a bandwidth management system like this policy control software?
