Are you planning to support centos5_x64 VEs anytime soon?

So far i did not see centos5 there:
http://openvz.org/download/template/repocache/
or there
http://download.openvz.org/template/precreated/

You can find centos5 i386 precreated template here:
http://openvz.org/download/template/cache/

When you install this images vzyum is not working out of the box
neither i can yum update inside this images

CentOs5 was released long time ago, there should be a reason(or no) why it is not officially
supported as a VE

OpenVZ is opensource project.

Please fell free to make these packages. We will be grateful to
You, say You many thanks and will deliver Your job to contribs directory.

thank you,
Vasily Averin
