hi

ostemplate: centos 4

when i do vzyum it install all thing after i log to ve

and type
yum update get

Cannot find a valid baseurl for repo: update
Error: Cannot find a valid baseurl for repo: update
Setting up Update Process
Setting up repositories

thanks

Hi,

1. Please check your yum repositories list (inside the VE) (on my Fedora 7 it is in /etc/yum.repos.d/).
2. Find there file which provides [update] repo. And please show us your settings in that section.

Thank You!

By the way, do you have an access to Internet from inside the VE?
