Hi!

I need to kill openvz kernel thread. vzctl start xxx didn't succeed due to quota errors. Now my thread is hanging around.

Are there any tools to kill this kernel thread? Sigkill, for sure, does not work ....

tnx in advance, Guido Stepken

What kind of quota errors?
Most likely your VE has been started...

Check you VEID in:
cat /proc/vz/veinfo

Thanks,
Kirill
