Hello

I have allow vps 101 with 1500 Mb ram

```
[root@server ~]# free -m
```

	total	used	free	shared	buffers	cached
Mem:	1500	20	1479	0	0	0
-/+ buffers/cache:		20	1479			
Swap:	0	0	0			

how ican hidden the real 16 g ram no one can se it at the server vps owner

```
[root@server ~]# free
```

	total	used	free	shared	buffers	cached
Mem:	1536000	20608	1515392	0	0	0
-/+ buffers/cache:		20608	1515392			
Swap:	0	0	0

I don't think you can do that... OpenVZ staff will have to confirm, though.

See --meminfo parameter description in vzctl man page.

before applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	16220	9908	6312	0	857	7718
-/+ buffers/cache:		1332	14887			
Swap:	32735	0	32735			

after applying 'vzctl set 141010 --meminfo privvmpages:1'

\$ free -m

	total	used	free	shared	buffers	cached
Mem:	256	141	114	0	0	0
-/+ buffers/cache:		141	114			
Swap:	0	0	0			

i like the idea of this.... but why does swap/buffers/cached usage zero out?

i guess the beancounters don't keep those stats seperate?
