[Editid and translated to english]

Hello,

I have installed on a VE (has local IP:192.168.1.8) Ventrilo .. Used are port 3754 (UDP and TCP)..

What I did:

On creation VE

```
vzctl set 1005 --iptables iptable_nat --save;
```

```
emacs /etc/init.d/vz
```

Added below:

```
iptables -t nat -P PREROUTING ACCEPT
```

```
//- How to provide access for VE to Internet
```

```
iptables -t nat -A POSTROUTING -o eth0 -j SNAT --to MY_PUBLIC_IP
```

```
//- How to provide access from Internet to a VE
```

```
iptables -t nat -P PREROUTING ACCEPT
```

```
iptables -t nat -A PREROUTING -p tcp -d 192.168.1.8 --dport  
3784 -i eth0 -j DNAT --to-destination MY_PUBLIC_IP:3784
```

```
iptables -t nat -A PREROUTING -p udp -d 192.168.1.8 --dport  
3784 -i eth0 -j DNAT --to-destination MY_PUBLIC_IP:3784
```

```
iptables -t nat -A PREROUTING -p TCP --dport 3784  
-j DNAT --to-destination 192.168.1.8:3784
```

- In dem VE

```
/sbin/iptables -t nat -A POSTROUTING -s ! 192.168.1.8  
-o venet0 -j SNAT --to-source 192.168.1.8
```

Can anyone help me, what is here wrong?

Thank you...

Kutschka

I'm afraid there are not too many English-speaking people here -- please use German forum. Oh, I see you already did that. OK then.

Sorry.. wrong forum.. I can't delete this entry.. (No delete button) But I did copy it to the german forum... (and translated here too..)

Thank you for understanding..

vzctl set 1005 --iptables iptable_nat --save;

I suppose it is incorrect. --iptables option _restricts_ set of accessible iptable modules inside VE. With this option all other tables can be disabled inside your VE.

I would recommend You to remove list of iptables modules from 1005.conf file. In this case all iptables modules loaded on HW node will be accessible inside VE.

Thank You,
Vasily Averin

I think the addresses are vice versa

(you want packages that are about to reach HN, ie. their destination is MY_PUBLIC_IP, to be redirected to VE), it should be:

iptables -t nat -A PREROUTING -p tcp -d MY_PUBLIC_IP --dport
3784 -i eth0 -j DNAT --to-destination 192.168.1.8:3784

Hello,

yes its solved..

Thank you..
