Hey I'm new to linux and I'm following the instructions for creating an OS template for RHEL 5. However when I need to install the OS template metadata, there is no selection for RHEL 5, I only see fedora and centos?

Is there any support for RHEL 5 yet?

Thanks,
Tony

Hi Tony,
you can use precreated OS template caches:
<http://openvz.org/download/template/cache/>

thank you,
Vasily Averin

centos5 is the same as RHEL5

Red Hat's binaries are not public accessible, but CentOS rebuild Red Hat's sources

I have access to the rhel5 binaries ... can I just build a template myself?
