Subject: Problem with the creation of many VE
Posted by bmaisonn on Tue, 11 Dec 2007 12:47:47 GMT

Hello,

i've made a custom template from a buildroot. I created and started 500 of it. It worked very well, but when i tried to start 500 more there was some problems.

Here is the type of errors i have :

ps: unable to open `/proc': Value too large for defined data type

My VEs are installed on their own partition (ext3) and the df command says :

Filesystem	1K-blocks	Used	Available	Use%	Mounted on
/dev/hdb1	157566568	5718728	151847840	4%	/var/lib/vz

My kernel is :

2.6.18-ovz-028stab045.1

Thanks.

Do you have 500 VE's setup? I don't know what hardware you're running on, but 6 VE's are recommended per CPU, so on a Dual Xeon, you shouldn't have more than 48 (6 x 8) VE's - 500 is a LOT. What kind of hardware are you running?
