Hello,
i've made a custom template from a buildroot. I created and started 500 of it. It worked very well, but when i tried to start 500 more there was some problems.
Here is the type of errors i have :
ps: unable to open `/proc': Value too large for defined data type

My VEs are installed on their own partition (ext3) and the df command says :
Filesystem 1K-blocks Used Available Use% Mounted on
/dev/hdb1 157566568 5718728 151847840 4% /var/lib/vz

My kernel is :
2.6.18-ovz-028stab045.1

Thanks.

Do you have 500 VE's setup? I don't know what hardware you're running on, but 6 VE's are recommended per CPU, so on a Dual Xeon, you shouldn't have more than 48 (6 x 8) VE's - 500 is a LOT. What kind of hardware are you running?
