Hi,

I've the following (or i want to)

eth0 - connected to 1st network - 50.1.1.1

eth1 - connected to 2nd network - 60.1.1.1

VPS1 - ip 50.1.1.2

VPS2 - ip 60.1.1.3

Will it automatically route VE1 thru eth0 & VE2 thru eth1, or will i need to create a bridge between both eth0+1?

Thanks in advance
