
Subject: [PATCH net-2.6.25][NEIGH] Make neigh_add_timer symmetrical to neigh_del_timer

Posted by [Pavel Emelianov](#) on Thu, 20 Dec 2007 09:50:37 GMT

[View Forum Message](#) <> [Reply to Message](#)

The neigh_del_timer() looks sane - it removes the timer and (conditionally) puts the neighbor. I expected, that the neigh_add_timer() is symmetrical to the del one - i.e. it holds the neighbor and arms the timer - but it turned out that it was not so.

I think, that making them look symmetrical makes the code more readable.

I agree, it looks more readable now, applied.

This code used to be a lot worse, I think we had some confusion about whether the timer should always not be pending in these circumstances. But that was a bug fix from a long time ago, however I believe that's where the dump_stack() bug check came from in the add timer case.
