Fedora core 7, got kernel: 2.6.22.9-91.fc7

installed the 2.6.22 kernel, system wont boot! had to revert back to 2.6.22.9-91.fc7 !

Any ideas on how to get openvz to work:?

Thanks
Daniel Moss

Daniel,
I would recommend You to use RHEL5-based openVZ kernels.

thank You,
Vasily Averin
