Hi guys

I have faced this problem in Centos 5. I am trying to install yum on the geust os. However, I could not because of the following error.

```
[root@localhost ~]# vzyum 101 install yum
ERROR: No such OS template: install
```

I have googled it and i saw some solutions but they did not work. Most of the solutions taled about OS template metadata. But, i did not manage to find the metadata for centos 5. Any idea that can help me to solve this issue.

Thanks a lot

shuaib85-

I created CentOS 5 template metadata some time ago. It has a kludge to eliminate the udev problem until it's fixed. Scroll down the page and you'll see it. Make sure and get the -3 version on this page if you are using it on CentOS 5.

Thanks for the help Mr Steve.

Now I no longer have this error. However I have a new one which is

```
[root@localhost Desktop]# vzyum 101 install yum
ERROR: RPM python path not found: /usr/share/vzpkgtools/vzrpm44/lib/python2.4/site-packages
```

I installed one package called vzrpm44. and this error started to appear.

I tried to solve the problem by installing

```
[root@localhost Desktop]# yum install vzrpm-python
Loading "installonlyn" plugin
Setting up Install Process
Setting up repositories
Reading repository metadata in from local files
Parsing package install arguments
Nothing to do
```

but the problem is not yet solved. I am running the host Centos 5. and the guest is centos 5 as well.

another guest is cenots 4 but it has no problem with vzyum

any idea?

Thanks

shuaib85-

Looks like you are missing the vzrpm44-python package. Did you install all of the template utilities (<http://openvz.org/download/template/utls/>)?
