hi all.

just start trying openvz.
i follow everything from the openvz wiki.

everything installed ok on latest updated centos 5.1
i can start and ping and enter and ssh into ve.

but, once inside ve, i dont have internet.
cant ping anywhere except the host.

in the wiki http://wiki.openvz.org/VE_creation
there's nowhere mention about routing or gateway.

i try to add default gateway inside ve:
$ route add default gw 172.16.1.1
SIOCADDRT: Network is unreachable

where did i go wrong?

tia.

Do you try to ping using IPs or hostnames? Is name resolving working?

ping both ip and hostname not working.
cant even ping gateway, which is also the dns server.
so, cant resolve anything.

more info:

firewall and selinux disabled.

tried other precreated templates.
tried debian, centos4, centos5.
same result.

btw. i have virtualbox installed also. does it makes any different???

any help is very much appreciated.

tia.

A little question : did you use VBoxManage clonevdi to create your VE ?

Cheers.

yes. off course.

i can access my router, access point, other computers, etc...
i can ping, browse, messenger, voip, bittorrent, everything.

btw. it's important to make this clear!
openvz run outside virtualbox. not inside virtualbox!
this is how i setup my system:
http://wiki.dennyhalim.com/centos-with-openvz-and-virtualbox

my computer even accessible from internet.
i setup sshd which is accessible from the whole world for my tunneling use.

but the ve is not accessible from the lan and cant access other lan too.
all pc, host and ve, everything is in same subnet.

make sure you have applied all the sysctl parameters from OpenVZ guide,
especially ip_forward.
Also make sure iptables -L confirms you have no firewall.

If it won't help, try running tcpdump in VE and then in VE0

to chech where/who traffic goes thru.

Thanks,
Kirill

GREAT!
it works now!
thanks a lot!

i know i edit that file before.
just have forgot to double check it...

thank you all!
