I've installed OpenVZ on debian etch.
I've created a vps with debian etch template, but I've a problem.
When I try to download something into a vps with wget, after some second, download stop.
Why?? How can i solve this problem?

hi Crash, you didn't provide much technical information.

-does the process exit? if not, what does strace on the process show?
-UBC failures?
-firewall rules in VE or HN?
-can you establish new connections while the download is stalled?

Rick

sorry, this problem occurs only if I'm entering with vzctl enter...
If I enter on VPS by SSH no problem occurs
