
Subject: "Error on control socket", ubuntu gutsy template [solved]

Hi!

I tried once the community supported gutsy template, but it had several problems, so I didn't use it. Now I read, that there is an official gutsy template, so I tried that too. It's working fine, but there are hundreds of error messages in syslog:

Jan 9 20:17:17 phoenix init: Error on control socket: Socket operation on non-socket

Jan 9 20:17:48 phoenix last message repeated 279401 times

Jan 9 20:18:49 phoenix last message repeated 551851 times

Jan 9 20:19:50 phoenix last message repeated 553643 times

In former template versions, this was caused by the upstart daemon, which replaced the old init system. The question is, is there a known solution to this? The system is working perfectly, but it is quite "ugly" to see these error messages flooding my syslog.

Update: Well, after all, I see, that not everything is fine, because the services doesn't start up automatically when the VPS starts up. Any ideas?

Thanks in advance!

Hi,

which vzctl are you using, plz post vzctl --version ?

which vzctl are you using, plz post vzctl --version ?

vzctl --version

vzctl version 3.0.18

I'll compile the newest version, and report back. Thanks for the idea, I didn't think this could be the problem. I hope you're right.

Thank you, this was the solution indeed.

Bye,
Balint
