Subject: weird memory usage

Hi,

i've just installed few VE using openvz, and like usual, added some monitoring for allocated ressources.

One problem occurs: i have a VE running MySQL and the memory usage show 100%.
free -m show :
Mem: 281   281   0   0   0   0
-/+ buffers/cache: 281   0
Swap: 0   0   0

Even if i increase the ressources (privmpages, oom, vmguar, etc), the amount of available memory is still 281Mb and is still used at 100%

The config for this VE is the same as another that i use in production on a similar hardware and software, and the other on does not show this "weird" behaviour.

Does anybody have an idea?

thanks

Hi,

I think You should to restart your VPS, please do it. Is 'free -m' output still weird?
But it is not expected behavior. I'll try to investigate this issue.

Thank You!

i will plan a VE restart tonight and give feedback on this problem (wether it is solved or not)

thanks

after VE restart, the ressources are well accounted. However, the huge load average problem remains.
