Hi everyone,

sorry for bugging you again, but I've a weird problem - once more.  
I just virtualized a fedora 3 machine running amavisd-new and I cannot get the service fully running now.

```
/etc/init.d/amavisd-new status -->
```

```
amavis-milter is stopped  
amavisd is stopped  
amavisd-new is stopped
```

so far...so good.

```
/etc/init.d/amavisd-new start -->  
Starting amavis-milter: OK  
Starting amavisd-new: OK
```

However checking the status of amavisd-new reveals, that only amavis-milter is running.

Is there something I need to consider?  
Other services as for example sshd, spamassassin etc. run smoothly.

Regards

Norman

PS: The original physical machine has no problems. All services - required - run.

Hello Norman,

can you please check if there any failcounters?  
/proc/user\_beancounters

--  
Konstantin.
