Hello When i try to install OpenVZ this message Appear

kernel >= 2.6.10 conflicts with lksctp-tools-1.0.2-6.4E.1.i386

I want to slove this problem .

Any Ideas ?

Regards
Tarek

rpm -e lksctp-tools

then retry

When i try to Do this Command this message appeared

error: Failed dependencies:
     lksctp-tools = 1.0.2 is needed by (installed) lksctp-tools-devel-1.0.2-6.4E.1.i386

Thanks for your reply if you had MSN Messenger ID please provide me it to Chating

When i try to create New VPS and Add ip to that the ip which i add to it can't login with root password which i assigned it to VPS
and it's login with the master root password ..

thats mean the ip address is not assigned to The VPS which i created it and it's already added in the the Main Server

Thanks
