Hello,

all ip address are routed to the main server and i can assign any ip to any VPS(s) which i created .  
when i try to assign ip to any vps the root password can't login with out the main root password

Thanks

Hi, it sounds like you have your VE IPs aliased to the hardware node. when you run ifconfig on your hardware node, you should not see the IPs which you want assigned to your VE. If you see them, remove them and add to the VE as follows:

```
vzctl set <VEID> --ipadd x.x.x.x --save
```

If you still have a problem, reply back with:

```
ifconfig;route -n;vzlist -a
```
