I've got a problem with vldump - it doesn't work. Please look at this.

```
vldump --compress --dumpdir /vz/dump --snapshot 101
```

```
No volume groups found
```

```
INFO: starting backup for VPS 101 (/vz/private/101)
```

```
ERROR: creating backup for VPS 101 failed (0.00 minutes): unable to dump into snapshot (use  
option --dumpdir) at /usr/bin/vldump line 678.
```

Are you using LVM to store your VE data on? If not, you can't use vldump --snapshot feature.
