Gents,

it would be nice to have the possibility to start a script befor / after vzctl starts a VE.

Maybe an additional var in veid.conf

preup=<filename>

postup=<filename>

with best regards  
yahbluez

Hi,

please look at  
<http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf>  
("Managing OpenVZ Scripts" - p. 87)

Can you please tell what exactly do you need?

Thank You!

Thank your for the hint.

That it is was to blind to see that in the manual.

best regards  
yahbluez
