I gave that vzmigrate a shot, and works nice.

Now when you have someone who's slow on migrating, and needs a resync, do i just need to run rsync manually on private/root or just one of them?

or can the vzmigrate script refresh the files on the new ve?

Scooter

when you run vzmigrate with "-r no", it doesn't remove a source VPS. So a resync of VPS back to first node will be much faster. Is this what you mean?
