Hi there!

It seems as though the --keep_dst option is backwards, and looking at the code:

```
undo_private () {
      if [ $keep_dst -eq 1 ]; then
            $SSH "root@$host" "rm -rf $VE_PRIVATE"
      fi
      undo_conf
}
```

That does not seem quite right to me; it should be -eq 0.

Am I reading this incorrectly?

--Jim

Hello Jim,

You are right, --keep_dst option works incorrect now.

Thanks for your correction!

We will include it in next release.

Regards,
Andrey
